PRINTING – Print at 100% scale, no "fit to page". Each code on page one is 44 mm; do not reduce below 35 mm or phones will struggle to read it. Plain white paper beats glossy, which reflects and blocks the camera.

WHAT IT DOES – Each code carries the whole contact card inside the pattern itself. Scanning opens the phone's Add Contact screen with name, title, mobile and email already filled in. It needs no internet and no service behind it, so it cannot expire.

TESTING – Before ordering a large run, print one page and scan every code with both an iPhone and an Android camera.

Web card codes

SCAN OPENS THE CARD PAGE – SMALL ENOUGH FOR A NAME CARD

Whole team
OPENS THE DIRECTORY OF ALL FOUR CARDS

WHEN TO USE THESE – These carry only a short web address, so the pattern is far simpler and stays readable down to about 20 mm. Use them on printed name cards, email signatures and brochures. The card page they open has a Save to contacts button, so the visitor still ends up with the full contact.

THE TRADE-OFF – They depend on the repository staying online. The codes on page one do not depend on anything at all. Use both: page one for anything expensive to reprint, page three for everyday material.
